Ex:2 Setting up a Zoho Creator account and exploring the platform architecture and interface.

Aim

To set up a Zoho Creator account, create a sample application, explore the process of creating forms, reports, and dashboards, and understand the platform architecture and interface, including the Develop, Deploy, and Manage components.

Setting Up Zoho Creator

Creating a Sample Application

Zoho Creator is a low-code application development platform that allows users to build custom business applications with minimal programming knowledge.

Sample Application Components

The sample application may contain the following components:

- Forms – Used to collect and store data.
- Reports – Used to display and analyze stored data.
- Pages – Used to create customized user interfaces.
- Dashboards – Used to display important information using charts, graphs, and other visual components.

Creating a Form, Report, and Dashboard

A. Creating a Student Form

A Form is used to collect and store data in an application. It provides fields such as text boxes, number fields, date fields, dropdown lists, and other input controls.

The screenshot displays a web application titled 'Student Management System'. On the left is a dark sidebar with a menu containing 'Student details' (selected) and 'Student details Report'. The main content area is titled 'Student details' and contains a form with the following fields: 'Name *' (split into 'First Name' and 'Last Name'), 'Register Name *' (with a masked input '#####'), 'Email *', 'Phone *' (with a country code dropdown set to '+91' and a value '81234 56789'), 'Address' (split into 'Address Line 1' and 'Address Line 2'), 'City / District', 'State / Province' (a dropdown menu), 'Postal Code', and 'Country'. A blue 'Submit' button is at the bottom of the form. The top right of the interface shows 'Trial expires in 5 days', 'Upgrade', 'Edit this application', and 'Help'.

B. Creating a Student Report

A Report is used to display and manage the data collected through the Student Form.

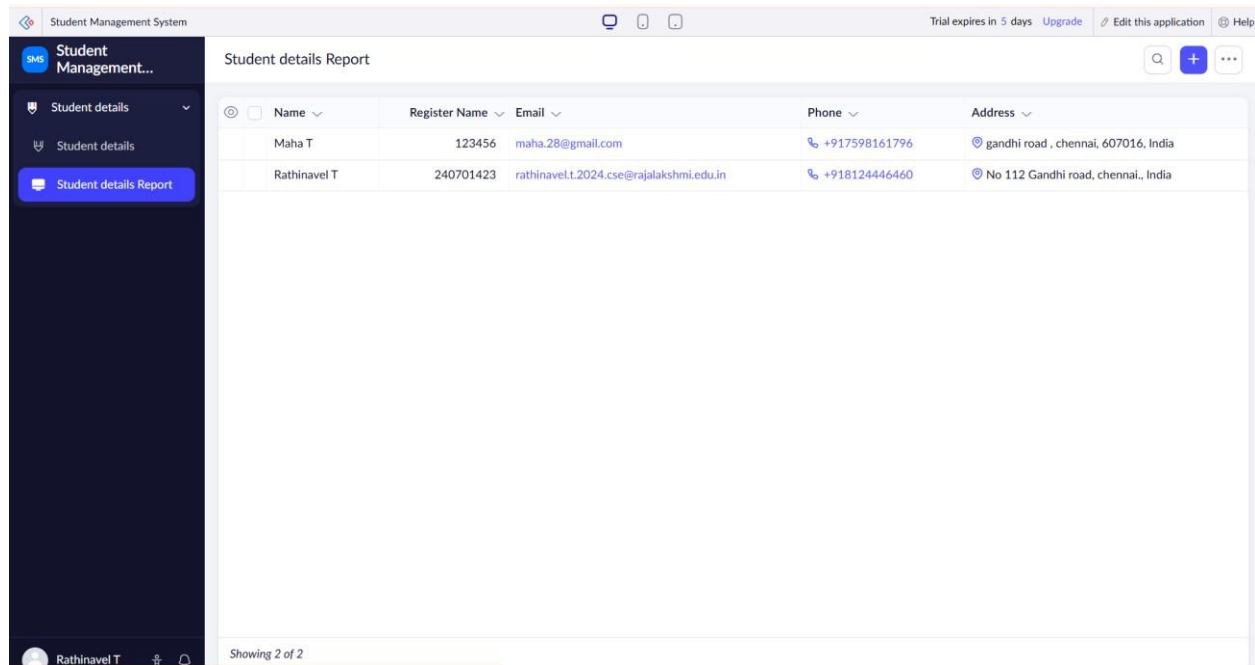

The Student Report can display:

- Student ID
- Student Name
- Department
- Course
- Year
- Phone Number

The report allows users to:

- View student records

- Search for students
- Filter student information
- Edit records
- Delete records

The screenshot displays a web application titled 'Student Management System'. On the left is a dark sidebar with navigation options: 'Student details' (selected) and 'Student details Report'. The main content area is titled 'Student details Report' and contains a table with the following data:

☐	Name	Register Name	Email	Phone	Address
☐	Maha T	123456	maha.28@gmail.com	+917598161796	gandhi road , chennai, 607016, India
☐	Rathinavel T	240701423	rathinavel.t.2024.cse@rajalakshmi.edu.in	+918124446460	No 112 Gandhi road, chennai., India

At the bottom of the table, it says 'Showing 2 of 2'. The top of the interface includes a header with 'Student Management System', a trial expiration notice 'Trial expires in 5 days', and links for 'Upgrade', 'Edit this application', and 'Help'.

C. Creating a Student Dashboard

A Dashboard provides a visual representation of student information using charts, graphs, and reports.

Dashboard Components

The Student Management Dashboard can display:

- Total Number of Students
- Students by Department
- Students by Year

EXPLORING THE ZOHO CREATOR PLATFORM ARCHITECTURE AND INTERFACE

Zoho Creator is mainly divided into three important sections:

A. DEVELOP

The Develop section is used to create and customise the Student Management System application.

1. Application

An Application is a complete software solution that contains different components such as forms, reports, pages, workflows, and dashboards.

Example:

The Student Management System is an application used to manage student information. **2.**

Form

A Form is used to collect and store data.

Example:

The Student Form collects student details such as name, ID, department, course, and contact information.

3. Report

A Report displays the data collected through forms in an organised manner.

Example:

The Student Report displays all registered students.

4. Page

A Page is a customised interface that can contain multiple components such as forms, reports, charts, and buttons.

Example:

A Student Management Home Page can contain student statistics and navigation buttons. **5.**

Dashboard

A Dashboard provides a visual summary of application data.

Example:

The Student Dashboard can display the total number of students and department-wise student statistics.

B. DEPLOY

The Deploy section is used to make the Student Management System available to users. **1.**

Users

Users are the people who access and use the application.

Examples:

- Administrator
- Faculty
- Students

2. Roles

Roles define the responsibilities and access levels of different users.

Example:

- Administrator: Complete access
- Faculty: Can view and update student records
- Student: Can view their own information

3. Permissions

Permissions determine what users can do within the application.

For example:

- View student records
- Add student records
- Edit student records
- Delete student records

4. Application Deployment

Application deployment means making the completed Student Management System available for authorized users.

C. MANAGE

The Manage section is used to maintain and control the application.

1. Application Settings

Application settings are used to configure the general properties and behaviour of the application.

2. User Management

User management allows the administrator to add, remove, and manage users.

3. Data Management

Data management is used to maintain student information.

It includes:

- Adding data
- Editing data
- Deleting data
- Importing data
- Exporting data

4. Security

Security protects student information from unauthorized access. It ensures that only authorized users can access sensitive student records.

5. Application Maintenance

Application maintenance includes updating, modifying, monitoring, and improving the Student Management System after deployment.

RESULT

Thus, a Zoho Creator account was successfully set up, and a Student Management System sample application was created. The creation and functionality of Student Forms, Reports, and Dashboards were explored. The Develop, Deploy, and Manage components of the Zoho Creator platform architecture and interface were also studied and understood.
